

Myson TRV 2-Way Valve helps keep control...

Leading heating manufacturer Myson offers a full range of valves and controls that perfectly complement their heat emitters. A perfect example being the Myson A-rated TRV 2-Way thermostatic radiator valve which employs unique two way flow engineering, making it hassle free to install and offering the best energy savings for the householder.

At the heart of the Myson TRV 2-Way is a robust liquid sensor which makes the valve highly responsive to temperature changes, allowing radiators to run at individually adjusted temperatures. The TRV 2-Way is highly reliable and suitable for use with all standard and decorative radiators and towel warmers.

The tried and tested TRV 2-Way valve uses the unique two way flow technology in an innovative patented design, which allows the valve to function perfectly no matter which way the water flows through the valve. Myson TRV 2-Way valve also features a positive shut off facility so that if the radiator is removed for any reason, the valve will not allow water to leak into the property from the pipework.

Carrying the European Thermostatic Efficiency Label (TELL) 'A' grade, the Myson TRV 2-way is the most complete thermostatic radiator valve range available for today's central heating systems. A perfect choice for the professional installer, homeowner, specifier, or for, Housing Associations and Local Authorities.
